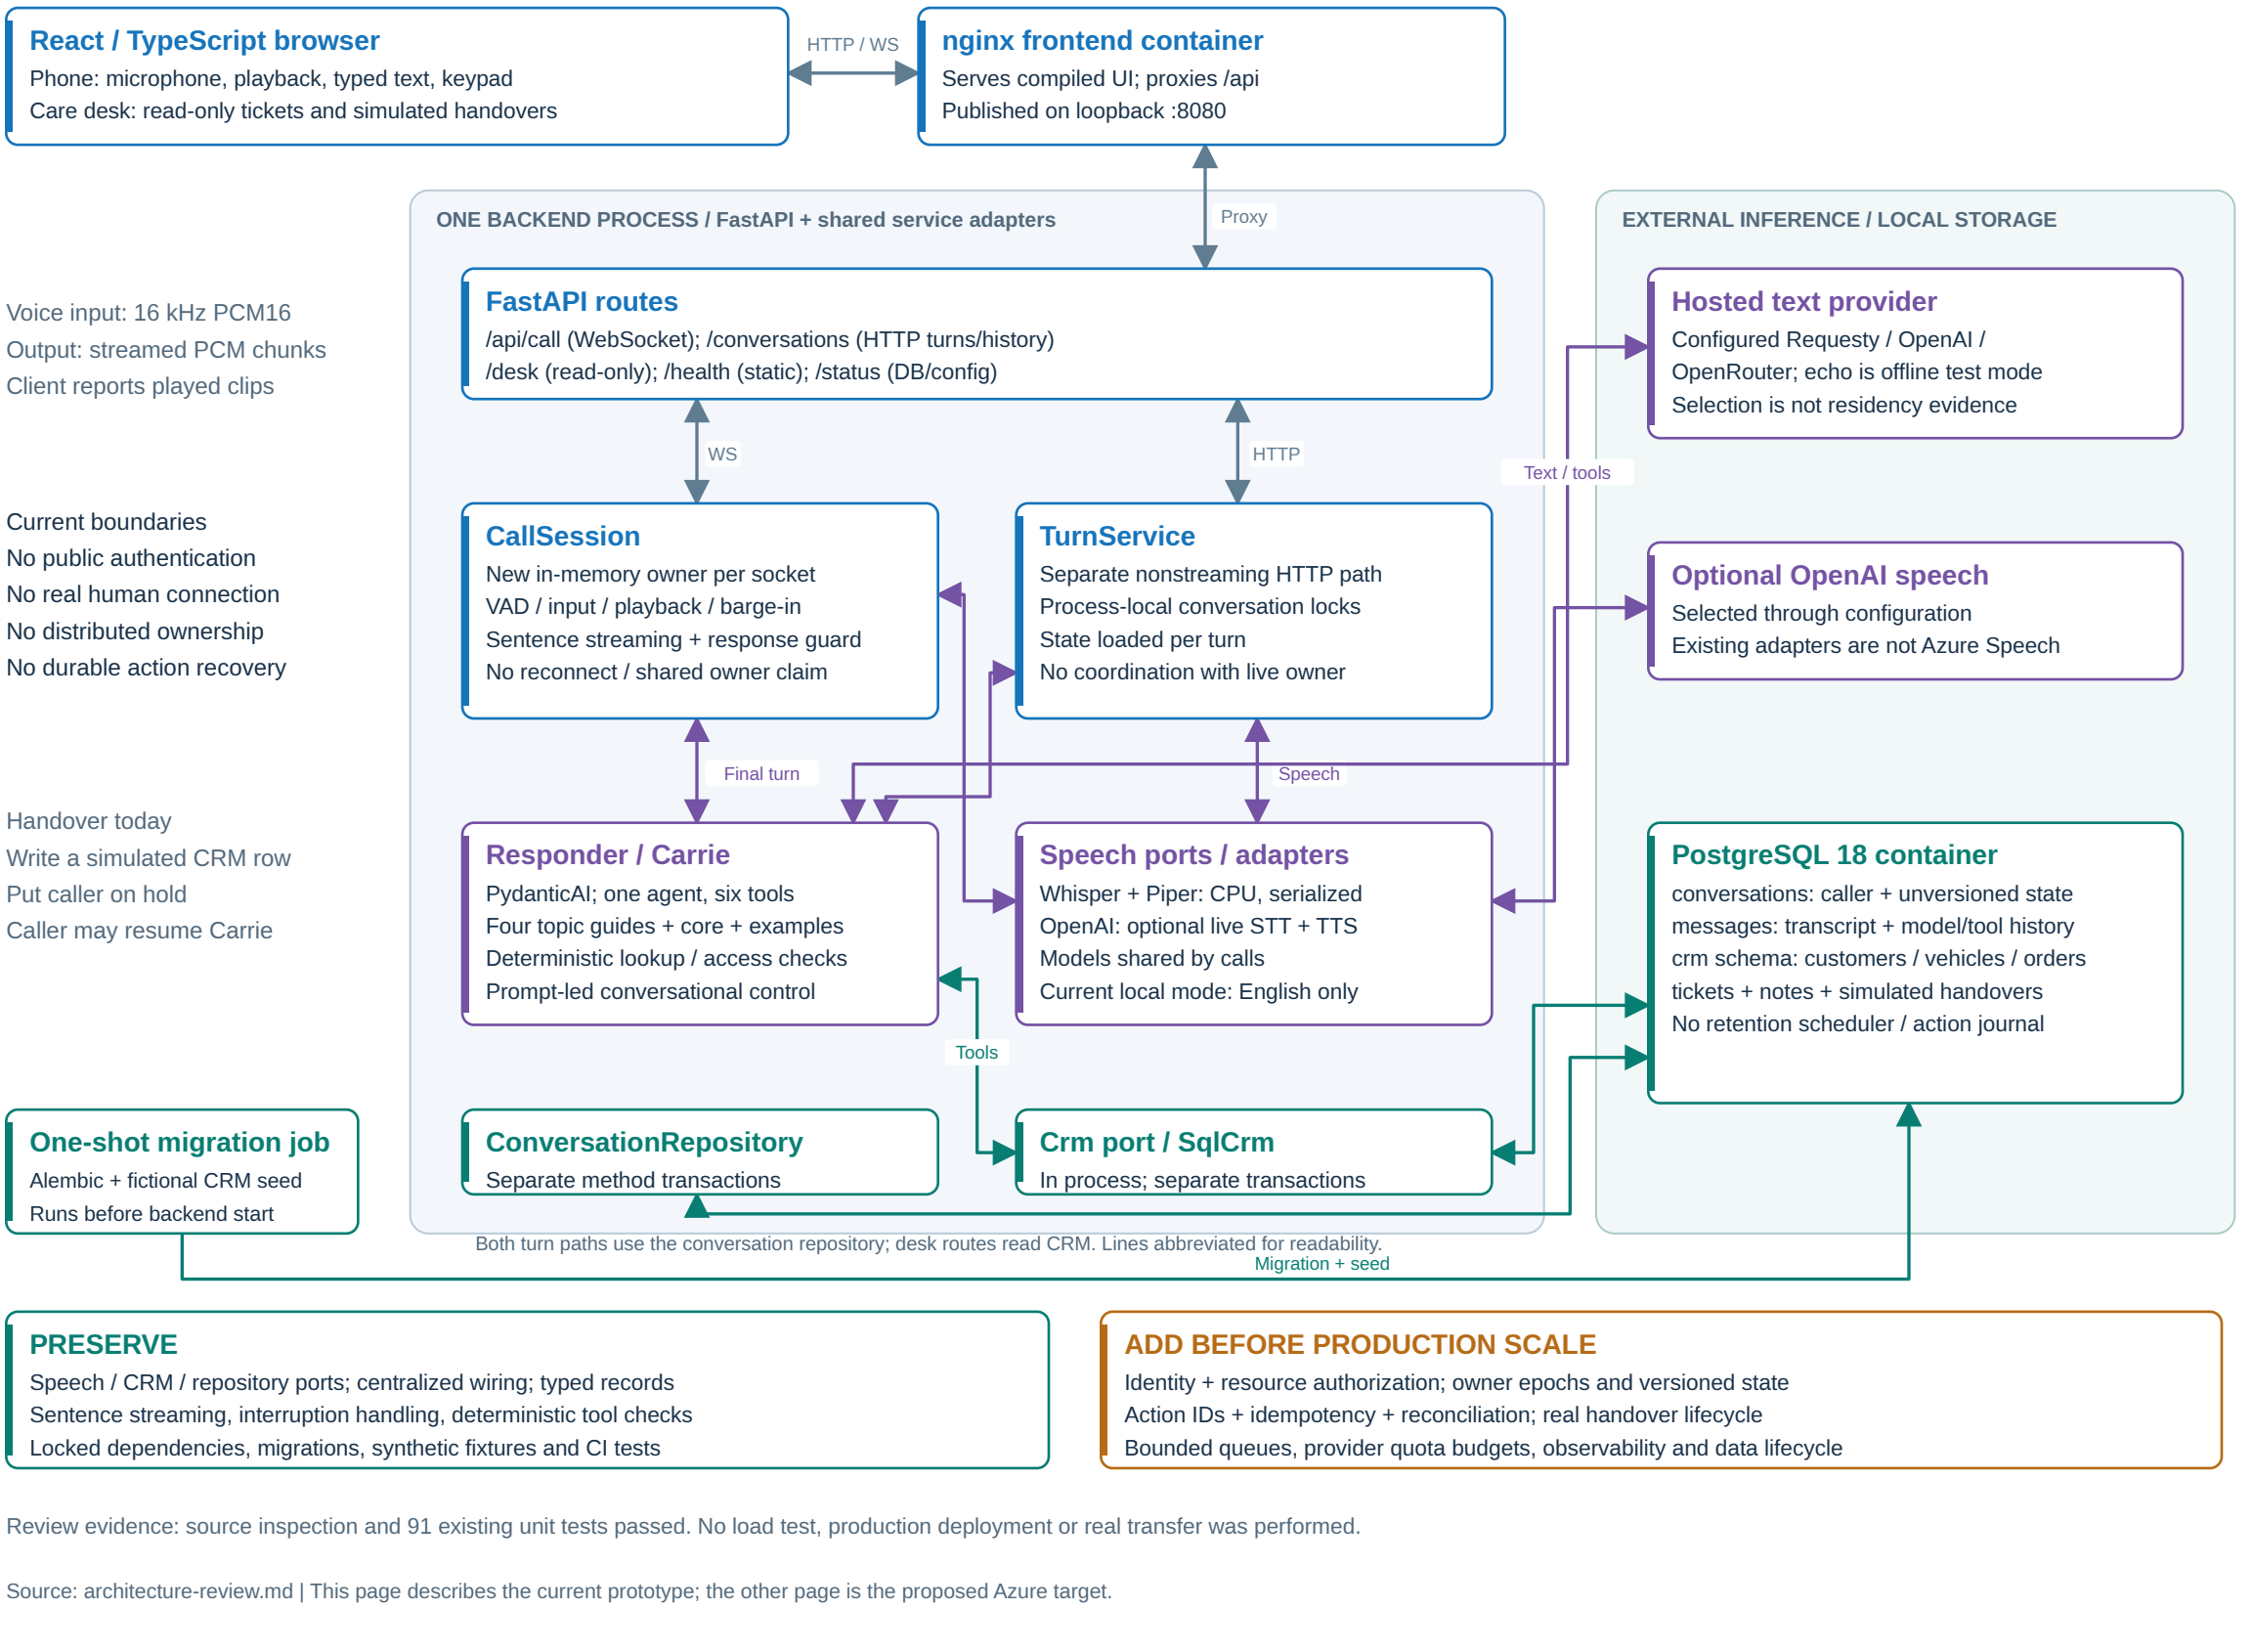
Carrie | Current application architecture

OBSERVED WORKING TREE / 5 NOV 2026 / Docker Compose prototype; no Azure resources or real telephone integration



PRESERVE

Speech / CRM / repository ports; centralized wiring; typed records
Sentence streaming, interruption handling, deterministic tool checks
Locked dependencies, migrations, synthetic fixtures and CI tests

ADD BEFORE PRODUCTION SCALE

Identity + resource authorization; owner epochs and versioned state
Action IDs + idempotency + reconciliation; real handover lifecycle
Bounded queues, provider quota budgets, observability and data lifecycle

Review evidence: source inspection and 91 existing unit tests passed. No load test, production deployment or real transfer was performed.

Source: architecture-review.md | This page describes the current prototype; the other page is the proposed Azure target.
